

# STICK IT TO TRICKY LINERS

TransferRite AirMask® is our answer to one of the industry's biggest problems. Air egress vinyls have channels that greatly reduce air entrapment to avoid bubbles, but most premasks don't stick to their textured liners. AirMask's **ULTRA**® adhesive is specifically engineered to adhere to areas of exposed air egress liners.

## AirMask®

From the makers of  
**TransferRite**®

**AirMask 510U** medium tack | transparent film

Excellent for partial wraps

Designed for use with exposed air release vinyls

**ULTRA**® adhesive provides superior adhesion to liner

Tear resistant

Once the decal has been fully squeegeed, gently pull the AirMask back over itself and it will release smoothly, leaving no residue behind.

TransferRite's AirMask makes installing partial vehicle wraps a breeze. Once you've positioned your graphic and peeled off the liner, squeegee the decal down firmly, working from the center to the outside.

When the AirMask is removed, you'll reveal a clean and pristine partial vehicle wrap that your customers will love.

We also offer a paper version that features the same revolutionary adhesive properties.

**992U** high tack | premium, heavyweight paper
