

PRECISION WITH DOMED DECALS

Raised, three-dimensional letters or logos, referred to as domed decals, are often used for graphics that stand out over common, flat vinyl lettering. When installing domed lettering, you need to ensure each letter is correctly aligned, spaced, and positioned on the surface. TransferRite® transparent film application tapes will help you achieve precision.

TransferRite®

1504 low tack | transparent film
Used for high gloss surfaces and doming
Can also be used for protection
Tear resistant

1510 medium tack | transparent film
Used for gloss surfaces and doming
Can also be used for protection
Tear resistant

Installing a domed decal letter by letter would be painful and tedious. TransferRite saves you time while accurately installing raised graphics.

Our 1504 and 1510 films work well on smooth surfaces and are perfect for easily installing your gloss domed lettering.

Applying domed decals with our transparent films allows you to see your letters and decals during your installation.
